EasyWarePro Message Numbers

1. Revision History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
</table>
| V3.9.2.4  | - Modified existing warning messages and added new ones due to the introduction of the ATS/ERS Spirometry Standard 2019. For FVC/FVL tests performed according to Standard 2019, message numbers have been replaced by warning notes in the UI and in the XML export.  
  - For FVC/FVL tests performed according to Standard 2005, and all other PFT test types, the following message number mechanism applies:  
    The parameter message no. contains a maximum of 7 error or warning codes using the following format: “aabbccddeeffgg.00”. Each number consists of 2 digits, except the first number, which consist of only 1 digit.  
      o Example: 2.00  →  Warning 2  
      o Example: 21415.00  →  Warning 2, 14 and 15  
      o Example: 220211.00  →  Warning 22, 2 and 11  
      o Example: 111234.00  →  Warning 11, 12 and 34  |
| V3.7.0.2  | - Added new warning messages that are related to the quality grading introduced by the ATS/ERS DLCO 2017 standard.  
  - Updated the descriptions of the message numbers and added clarifications.                                                                                                                                 |
| V3.5.1.7  | - The maximum number of error codes stored per trial has been increased from 3 to 7.  
  - The applicable test types for message number 1 have been corrected. Message number 1 was not applied for FVL tests in versions lower than V3.5.1.7 and has been replaced by message number 38.                                                |

2. Message Numbers

For all types of tests, EasyWarePro (or EasyOne Connect) contains a parameter called “Message No”. This parameter contains information about errors and warnings associated with a trial. This parameter is also available in the XML export file.  

The following table contains a list of all error and warning codes, with short descriptions of the causes for these particular warnings or errors, and possible resolutions.
Some error or warning messages do not appear if another message is shown.
The column ‘Action’ contains the following symbols:

- ✓ Everything is OK, no action required
- ⚡ The problem can be resolved by patient
- 💾 The problem can be resolved by checking the EasyOne Pro device.

</table>
| 4   |        | FVC, FVL  | Please, blow out longer  
**Problem:** Patient may not have exhaled completely. Detailed criteria: Expiration time less than 2 seconds, OR volume in the last 0.5 seconds of the expiration more than 100 ml.  
**Solution:** The patient must exhale longer and force as much air as possible out of his or her lungs.  
*Remark: This message was replaced by no. 38 in EasyOne Connect version 3.5.1.7.* |
| 5   |        | FVC, FVL  | Unable to detect forced maneuver  
**Problem:** Software was unable to detect a forced maneuver.  
**Solution:** Please retry maneuver and follow the instructions that are shown during the maneuver. |
| 6   |        | SVC       | Unable to detect steady tidal breathing  
**Problem:** The software was unable to detect steady tidal breathing. Detailed criteria: All end-inspiratory volumes of 3 breaths are not within 200 ml, and/or the difference in VT of 3 breaths is larger than 200 ml.  
**Solution:** Please instruct the patient to breathe steadily during tidal breathing phase.  
*Remark: This message was replaced by no. 42 in EasyOne Connect version 3.9.2.4.* |
| 7   |        | SVC       | Incomplete maneuver, unable to calculate IRV  
**Problem:** Unable to detect complete maneuver and to calculate IRV.  
**Solution:** Please retry maneuver and follow the instructions that are shown during the maneuver. Complete in- and expiration are required. |
| 8   |        | SVC       | Incomplete maneuver, unable to calculate ERV  
**Problem:** Unable to detect complete maneuver and to calculate ERV.  
**Solution:** Please retry maneuver and follow the instructions that are shown during the maneuver. Complete in- and expiration are required. |

</thead>
</table>
| 9   | ♂      | FVC, FVL  | Test started too early  
**Problem:** Early test start detected. Detailed criteria: The time to peak flow (PEFT) is less than 30 ms, or flow detected before test was started.  
**Solution:** Please instruct the patient to wait until the baseline setting is finished and until the software signals to start the test. |
| 10  | ♂      | FVC, FVL  | Cough detected  
**Problem:** A cough has been detected.  
**Solution:** Please instruct the patient to avoid coughing during the measurement. |
| 11  | ♂      | DLCO      | Gas inspiration time too long  
**Problem:** Long inspiration time detected. Detailed criteria: Inspiration time > 4.0 seconds.  
**Solution:** Please instruct the patient to inhale test gas faster. |
| 12  | ♂      | DLCO      | Breath hold time out of range  
**Problem:** Breath hold time is out of range. Detailed criteria: Breath-hold time is out of range (8-12 seconds).  
**Solution:** Please instruct the patient to exhale immediately when the corresponding message shows and when the valve opens. |
| 14  | 🔄      | CalCheck  | Calibration result out of range – Check setup  
**Problem:** Calibration result is out of range. Detailed criteria: The measured volume is out of ±3.5% of the target value.  
**Solution:** Please check the test setup and repeat the test. If error reappears please contact service. |
| 15  | 🔄      | CalCheck  | Try again - Flow criteria not met!  
**Problem:** Cal-syringe flow rate too fast or too slow  
**Solution:** Please perform the calibration check with the appropriate flow speed. |
| 16  | 🔄      | CalCheck  | Inspiratory or expiratory maneuver not detected  
**Problem:** Only an inspiratory or expiratory maneuver detected (and not both).  
**Solution:** Please perform complete inspiratory and expiratory maneuvers and follow the given instructions. |
<table>

</thead>
</table>
| 17  | ![Gear] | DLCO | Check complete gas connection and valve assembly  
**Problem:** Significant difference between calibration and inspiratory CO concentration detected.  
**Solution:** Please check complete gas connection and valve assembly and that test is performed correctly. |
| 18  | ![Person] | DLCO | Low inspiratory volume detected  
**Problem:** The Inspiratory volume of the DLCO test is <85% of the target value.  
**Solution:** Please encourage the patient to inhale at least up to the dotted volume line, which indicates 90% (for DLCO 2017) or 85% (for DLCO 2005) of the expected VC. |
| 19  | ![Gear] | DLCO | Check complete gas connection and valve assembly  
**Problem:** Significant difference between calibration and inspiratory CO concentration detected.  
**Solution:** Please check complete gas connection and valve assembly, and that test is performed correctly. |
| 20  | ![Gear] | DLCO | Check patient technique, gas supply and valve assembly  
**Problem:** The alveolar helium concentration measured is out of range.  
**Solution:** Please check complete gas connection and valve assembly, and that test is performed correctly. |
| 21  | ![Gear] | DLCO | Check patient technique, gas supply and valve assembly  
**Problem:** The expiratory CO concentration measured is out of range.  
**Solution:** Please check complete gas connection and valve assembly, and that test is performed correctly. |
| 22  | ![Gear] | DLCO | Check patient technique, gas supply and valve assembly  
**Problem:** The alveolar CO concentration measured is out of range.  
**Solution:** Please check complete gas connection and valve assembly, and that test is performed correctly. |
| 23  | ![Gear] | DLCO | Check patient technique, gas supply and valve assembly  
**Problem:** The alveolar volume (VA) is out of range.  
**Solution:** Please check complete gas connection and valve assembly, and that test is performed correctly. |
### Application Note

</thead>
</table>
| 24  | 🔄️     | DLCO      | Check patient technique, gas supply and valve assembly  
**Problem:** The measured DLCO value is out of range.  
**Solution:** Please check complete gas connection and valve assembly, and that test is performed correctly. |
| 25  | ⚡️      | MBW       | Unable to calculate FRC extrapol – Please check for leaks  
**Problem:** The extrapolated MBW volume (i.e., the volume that would be washed out after the washout has been stopped) cannot be determined.  
**Solution:** Do not stop the washout too early and/or check for leaks. |
| 26  | ⚡️      | MBW       | FRC extrapol too high - Do not stop the washout too early  
**Problem:** The extrapolated MBW volume (i.e., the volume that would be washed out after the washout has been stopped) is greater than 1 liter.  
**Solution:** Do not stop the washout too early and/or check for leaks. |
| 27  | 🔄️     | MBW       | Inspiratory gas leak detected  
**Problem:** Inspiratory gas leak detected. Detailed criteria: The end-inspiratory molar mass deviates from the tracer gas molar mass. This indicates that ambient air is inspired during the maneuver.  
**Solution:** Please check valves and that FRC barriette and spirette are properly inserted. Check that nose clip is properly positioned and that patient is breathing normally.  
**Remark:** This message only appears in EasyOne Connect versions before 2.1.0.9. |
| 28  | ⚡️     | MBW       | High inspiratory or expiratory pressure detected  
**Problem:** High inspiratory or expiratory pressure detected. Detailed criteria: Peak pressure at the flow sensor exceeds +/- 5 mb.  
**Solution:** Please check that O2 inlet pressure is set to 3-4 bar or 44-58 psi. Only minimal pressure variations are allowed during the test. Ensure that patient's breathing is not too deep or too fast, and is within the limits of ±1.5 l/s. |

| 29  | ![Icon] | MBW       | Check complete gas connection and valve assembly  
**Problem:** Side-stream flow is out of range (≤6 ml/s or ≥12 ml/s).  
**Solution:** Please check complete gas connection and if patient tube (Maintenance kit) needs to be replaced. Contact support if error persists.  
**Remark:** This message only appears in EasyOne Connect versions before 1.9.0.19.  
| 30  | ![Icon] | DLCO      | Allow device to warm up.  
**Problem:** CO sensor drift detected.  
**Solution:** Please let the instrument warm up and repeat the test. If the error reappears, please contact service.  
| 31  | ![Icon] | MBW       | N2 concentration at end of test too high – Longer washout required  
**Problem:** Tracer concentration at end of test too high. Detailed criteria: tracer concentration at end of test is ≥2% N2.  
**Solution:** Repeat the test, encouraging the patient to continue breathing until at least 3 breaths with concentrations below 2% N2 are achieved.  
| 32  | ![Icon] | MBW       | The automatic calibration of the CO2 sensor failed  
**Problem:** The automatic calibration of the CO2 sensor failed.  
**Solution:** Repeat the test. If the error reappears, contact service.  
**Remark:** This message only appears in EasyOne Connect versions before 2.1.0.9.  
| 33  | ![Icon] | DLCO      | CO level too high – Please respect waiting time between trials  
**Problem:** CO level during tidal breathing too high.  
**Solution:** Wait at least four minutes between DLCO tests. Please also check the DLCO valve unit. If the error occurs repeatedly, contact service.  
| 34  | ![Icon] | MBW       | Tidal breathing volume too low  
**Problem:** Tidal breathing volume too low. Detailed criteria: Tidal volume outside 4 to 30 mL/kg body weight. OR outside 0.25 to 0.3 L if the body weight is not stated.  
**Solution:** Ask patient to breathe regularly, calmly and within the suggested range.

| 35  | MBW    | MBW       | Check patient technique, gas supply and check for leaks  
#### Problem: Volume drift during washout test detected. The volume drift correction could not be performed and/or the parameters IRV and/or ERV are smaller than zero.  
#### Solution: Check for correct test performance and/or for leaks. If the error occurs repeatedly, contact service. |
| 36  | DLCO   | DLCO      | DLCO-Warning: Check patient technique  
#### Problem: Measured Vd (Fowler dead space) out of range  
#### Solution: Ask patient to exhale steadily after breath hold |
| 37  | FVC, FVL | FVC, FVL | End of test criteria not met (short exhalation time)  
#### Problem: Patient has not exhaled long enough, in accordance with ATS/ERS exhalation time criteria. Detailed criteria: expiration time was less than 6 seconds, for patients with age $\geq 10$ years; or less than 3 seconds for patients that are between 7 and 10 years old. No criteria is applied for patients $\leq 6$ years (preschool age).  
#### Solution: Please motivate the patient to exhale longer and force as much air as possible out of his or her lungs.  
#### Remark:  
1. This message was introduced with EasyOne Connect version 3.5.1.7.  
2. This warning can be enabled or disabled in the configuration (setting "Enforce minimum 6-second expiration").  
3. In version 3.8.0.11 and above, this message is only applicable for tests performed under the Spirometry Standard 2005 settings. |

</table>
| 38  | ![Human Icon](image) | FVC, FVL | Abrupt end of test detected  
**Problem:** Short expiration time or high flow at end of test detected. Patient may not have exhaled completely. Detailed criteria: For patients with age \( \geq 7 \) years, volume during the last 0.5 seconds \( >100 \text{ml} \), or exhalation time less than 2 seconds. No criteria applied for age \( \leq 6 \) years (preschool age).
**Solution:** The patient must exhale longer and force as much air as possible out of his or her lungs.
**Remark:**
1. *This message was introduced with EasyOne Connect version 3.5.1.7.*
2. *In version 3.8.0.11 and above, this message is only applicable for tests performed under the Spirometry Standard 2005 settings.* |
| 39  | ![Human Icon](image) | FVC, FVL | End of test criteria not met (Plateau criteria)  
**Problem:** Patient may not have exhaled completely, in accordance with ATS/ERS plateau criteria. Detailed criteria: For patients with age \( \geq 7 \) years, volume during the last second \( > 25 \text{ml} \). No criteria applied for age \( \leq 6 \) years (preschool age).
**Solution:** Please motivate the patient to exhale longer and force as much air as possible out of his or her lungs.
**Remark:**
1. *This message was introduced with EasyOne Connect version 3.5.1.7.*
2. *In version 3.8.0.11 and above, this message is only applicable for tests performed under the Spirometry Standard 2005 settings.* |
| 40  | ![Human Icon](image) | DLCO | VI < 90% of largest VC  
**Problem:** Patient may not have inhaled completely. Additional note: ATS/ERS criteria are still fulfilled if VI is between 85% and 90% of the largest VC in the same test session and VA is \( \geq 0.95 \times \text{VAmax} \) OR VA is \( \geq \text{VAmax} - 200\text{mL} \); where VAmx is the largest VA from other maneuvers graded as A.
**Solution:** Please encourage the patient to inhale at least up to the dotted volume line, which indicates 90% of the expected VC.

<td><strong>Problem:</strong> The software was unable to detect steady tidal breathing. Detailed criteria: The difference between the highest and the lowest points of any four consecutive end-expiratory volume points is greater than 15% of the tidal volume. <strong>Solution:</strong> Please instruct the patient to breathe steadily during tidal breathing phase. <strong>Remark:</strong> This message was introduced with EasyOne Connect version 3.9.0.10.</td>
