# Trust the ndd *EasyOne Connect* solution when it comes to your EMR integration project

Seamlessly integrate any *EasyOne* device into your EMR system using our *EasyOne Connect* software. *EasyOne Connect* software provides a fast, accurate and reliable connectivity solution to meet your needs.
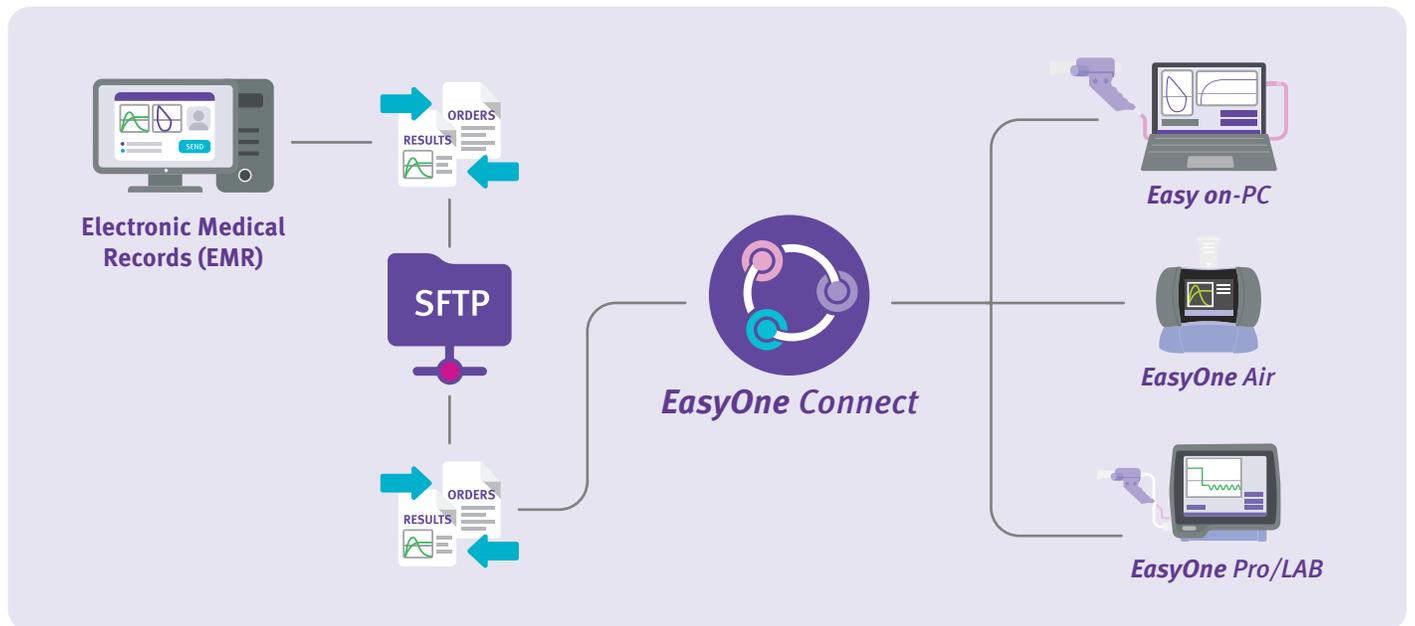

✔ Advantages

- ✔ **Successful EMR integrations** with leading EMR vendors including Epic, Athena, Allscripts, eClinical Works, Cerner and more!
- ✔ **Robust user management solution** including active directory compatibility
- ✔ **Centralized** patient database

- ✔ Support of all major data exchange protocols including **HL7** and **API**
- ✔ **Dedicated connectivity team** for EMR implementation projects

Steps for a successful integration:

1
Initiate an interface project with your EMR vendor

2
One-on-one meeting with our EMR Connectivity Engineer to **customize a workflow that meets your needs**

3
Set up & **testing of the interface**

4
Move to **production!**

✔ It's that easy!

How does it work?

Electronic Medical Records (EMR) → SFTP → EasyOne Connect → Easy on-PC, EasyOne Air, EasyOne Pro/LAB

- ndd's EMR integration solution is **a file-based integration**.
- We utilize **SFTP or a network-based location** to communicate with an EMR vendor.
- The EMR vendor sends *EasyOne Connect* an **HL7 file** and then *EasyOne Connect* picks that file up and processes it. **That's it!**

Requirements from you (end customer)

All you need is a **suitable SFTP or network location** that ndd can utilize for communication with your EMR vendor.
